

Hazard Assessment & Control

This 4-hour **in-person** or **scheduled online** workshop focuses on the identification, assessment, and control of hazards (the things at work that cause you to get hurt). During the first half of the workshop, you explore the fundamental concepts of hazard assessment through activities and classic lecture. In the second half, you go step-by-step through the creation of a formal hazard assessment specific to your site. By the end of the course, you will have a solid understanding of the fundamentals, as well as a customized formal hazard assessment ready for implementation the moment you return to work.
