

Circumstances of our normal duties can change quite quickly depending on several factors and the biggest factor in that possibility is weather. Once we hit the fall months the chance of heavy snowfalls, icy conditions, wet floors, or other drastic changes can create slippery walking conditions ripe for slip, trip, or fall incidents with the potential for injury. Being situationally aware will help you to prevent incidents so you can adapt to changes and react accordingly.

SITUATIONAL AWARENESS PREVENTS INJURY!

DIRECTIONS

We need to be on constant watch for emerging hazards at work. Doing so will help to prevent injuries. Watch the video on <u>Situational Awareness</u> and then lead discussion using the questions below.

SAFETY SEGMENT DISCUSSION

Guiding Questions:

- Is situational awareness similar to an informal hazard assessment? How so?
- What was the common distraction on the video?
- Have you ever been distracted and almost got injured?

Notes to the Team Leader:

• Facilitate an atmosphere of support and openness to feedback by encouraging the staff to share experiences or opinions without fear of reprisal.

Follow the CCSA and check our other resources. 仔 🚳 🖸 🛞 🗓
